INSTALLATION MANUAL

ASSEMBLY INSTRUCTIONS

1. Use the fixation support to mark the hole.
2. Screw the provided screws, fixing the support to the wall.
3. Fit the accessory in the support fixed into the wall.
4. Place the product by tightening the fixing screw, with the provided tool.

INSTALLATION RECOMMENDATIONS

Accessories should be applied after the construction ends, namely after the painting and treatment/ varnishing of wood. Acidic substances or those containing solvents should not be used for cleaning floors or other parts of the building, after the installation of accessories, because the vaporization of these products may cause damage. Check that there are no pipes or cables before drilling any holes.

CLEANING AND MAINTENANCE

During cleaning, never use steel or glass wool sponges, as they can release residues that will later form corrosion points. Use a nylon cloth or sponge moistened with water, and then clean with a soft, dry cloth. The surface of the articles is liable to be attacked, leading to the eventual appearance of red/brown spots, if often subjected to chemical agents, salted air, rain or other external agents. These spots can be avoided with special care during the application and regular maintenance/cleaning.
